A stepper motor or step motor or stepping motor is a brushless DC electric motor that divides a full rotation into a number of equal steps. The motor's position can then be commanded to move and hold at one of these steps without any position sensor for feedback (an open-loop controller), as long as the motor is carefully sized to the application in respect to torque and speed.

Hi, I need some help. I have connected a stepper motor (ROB-09238) to easy drive (ROB-10267) and the current supplied to the easy goes up to 640 mA on 12V.

This instructable is the translation of another that was originally written in Spanish, so I beg your pardon if I have many grammatical errors, if so off I'd love to suggest me to edit it. I just do it because I like to share my projects. It is a solar tracker, but not before mentioning my inspiration were devices by geo bruce and aplavins, except in my case use stepper motors, which can reduce ...

In fabrication, computer numerical control (CNC) or simply numerical control (NC) is the automated control of
machining tools (drills, boring tools, lathes) by means of a computer, in which a NC machine operates on a
piece of material (metal, plastic, wood, ceramic, or composite) to transform it to precise specifications.NC
machines combine a motorized tool and a motorized platform with a ...
