In article number 1801809, Liangti Qu and co-workers establish large-scale series-connected asymmetrical micro-supercapacitors (AMSCs) on a flexible substrate through laser direct writing technology. The integrated AMSC array with the high voltage output exhibits a feasibility for practical application by combination with energy conversion (e.g., solar cells) and energy consumption devices.

A photodiode is a semiconductor device that converts light into an electrical current. The current is generated when photons are absorbed in the photodiode. Photodiodes may contain optical filters, built-in lenses, and may have large or small surface areas. Photodiodes usually have a slower response time as their surface area increases.
