Tungsten-carbon nanotube photonic crystals exhibiting high spectral selectivity and extended high-temperature thermal stability are designed and fabricated via growth of nanopatterned carbon nanotubes followed by atomic layer deposition of alumina and tungsten.

The internal arrangement of a microprocessor varies depending on the age of the design and the intended purposes of the microprocessor. The complexity of an integrated circuit (IC) is bounded by physical limitations on the number of transistors that can be put onto one chip, the number of package terminations that can connect the processor to ...
