In linguistics, syntax (/ˈsɪntəkst/) is the set of rules, principles, and processes that govern the structure of sentences in a given language, usually including word order. The term syntax is also used to refer to the study of such principles and processes. The goal of many syntacticians is to discover the syntactic rules common to all languages. In mathematics, syntax refers to ...

**Syntax - Wikipedia**

A syntactic category is a type of syntactic unit that theories of syntax assume. Word classes, largely corresponding to traditional parts of speech (e.g. noun, verb, preposition, etc.), are syntactic categories. In phrase structure grammars, the phrasal categories (e.g. noun phrase, verb phrase, prepositional phrase, etc.) are also syntactic categories.

Hi Bob, The use of â€“ing forms was touched on in a previous question (see 'â€“ing forms and post modification'), but itâ€™s worth returning to, not least because your question raises interesting issues relating to word class and syntactic function. The notion of word class (also called part of speech) is a convenient one for labelling purposes but tends to buckle under pressure.
