INTRODUCTION

Insect collecting refers to the collection of insects and other arthropods for scientific study or as a hobby. Because most insects are small and the majority cannot be identified without the examination of minute morphological characters, entomologists often make and maintain insect collections. Very large collections are conserved in natural history museums or universities where they are ...

Notes on Taxonomy and Nomenclature Top of page. The family Amaranthaceae includes 174 genera and about 2500 species distributed worldwide especially in warm and dry temperate areas, the subtropics and saline habitats (Stevens, 2012). Alternanthera is a diverse genus (80–200 species) and the second largest in the subfamily Gomphrenoideae of Amaranthaceae.

Alternanthera philoxeroides (alligator weed)

Abstract. Ticks are important disease vectors in Kenya with documented evidence of carriage of zoonotic pathogens. Coxiella burnetii is an important tick-borne pathogen that is underreported in Kenya and yet this infection likely contributes to undiagnosed febrile disease in pastoral communities. Archived human blood (278) and tick pool samples (380) collected from five pastoral communities in ...

Coxiella burnetii Detected in Tick Samples from Pastoral

The images on this website are merely a small cross-section of the species and images found in Rick West's photo collection. Viewers are welcome to use this website as an identification tool, however, viewers must realize that although many tarantulas are colour/pattern specific, identifications can never be positively made from images alone.
