

boilers evaporators and condensers pdf

In systems involving heat transfer, a condenser is a device or unit used to condense a substance from its gaseous to its liquid state, by cooling it. In so doing, the latent heat is given up by the substance and transferred to the surrounding environment. Condensers can be made according to numerous designs, and come in many sizes ranging from rather small (hand-held) to very large (industrial ...

The graphic is a reproduction of a Fasco motor I wired yesterday for a customer. It is basically self-explanatory. The only thing missing from this graphic is the motor rotation wiring which is a yellow and a purple wire that will reverse the direction of the motor depending on what direction is needed.

A heat exchanger is a device used to transfer heat between two or more fluids. In other words, heat exchangers are used in both cooling and heating processes. The fluids may be separated by a solid wall to

prevent mixing or they may be in direct contact. They are widely used in space heating, refrigeration, air conditioning, power stations, chemical plants, petrochemical plants, petroleum ...
