TECHNICAL GLOSSARY Cyclic loads: Loads which occur at regular intervals. To affect a chimney they must last long enough to set up vibrations in the chimney. They may be superimposed on steady-state loads, e.g. gusts in a windstorm.

(ASSOCIATION OF TECHNICAL LIGHTNING & ACCESS SPECIALISTS)

A chimney sweep is a person who clears ash and soot from chimneys. The chimney uses the pressure difference caused by a hot column of gas to create a draught and draw air over the hot coals or wood enabling continued combustion. Chimneys may be straight or contain many changes of direction. During normal operation, a layer of creosote builds up on the inside of the chimney, restricting the flow.
