In computer science, object composition (not to be confused with function composition) is a way to combine simple objects or data types into more complex ones. Compositions relate to, but are not the same as, data structures, and common ones are the tagged union, set, sequence, and various graph structures, as well as the object used in object-oriented programming.

Population genetics is a subfield of genetics that deals with genetic differences within and between populations, and is a part of evolutionary biology. Studies in this branch of biology examine such phenomena as adaptation, speciation, and population structure.. Population genetics was a vital ingredient in the emergence of the modern evolutionary synthesis.
