The typical flex-wing hang glider has structure and aerodynamic design features that differ significantly from typical lightweight private or ultralight aircraft. Figure 3 shows some of the design nomenclature.

A STUDY OF PRESSURE AND HEAT TRANSFER OVER AN 80° SWEEP SLAB DELTA WING IN SUPERSONIC FLOW By Allen H. Whitehead, Jr., and James C. Dunavant Langley Research Center SUMMARY An experimental investigation has been conducted to obtain heat-transfer and pressure distributions over an 80° swept slab delta wing at Mach numbers of 6.8 and 9.6 in air.

NASA MEMO 1-19-59L-1 D\_1 D\_1 O Y\_ Z NASA MEMORANDUM ... delta-wing gliders as well as capsules having blunted faces. Methods ... flat-plate area such as a wing which is stabilized nearly normal to the flight path (that is, at an angle of attack of nearly 90°) at the time

### **NASA**

Delta Wing Glider Airplanes with conventional wings use ailerons to control roll (left and right motion), a rudder to control yaw (left or right movement of the nose), and elevators to control pitch (up and down movement of the nose). Airplanes with delta- or triangular-shaped wings have a rudder, but only one control surface, an elevon to control pitch and roll.

### **Aeronautics Guide - Delta Wing Glider | Curriki**

Aeronautics: An Educator's ... Like any wing, the parawing depends on the movement ... The little glider was built and flown by NASA during the early 1960's to evaluate the parawing concept, and to determine its suitability to replace the parachute landing system on the Gemini spacecraft.

by the lower surface of the wing, a glider would need only a flat wing like a kite. This, of course, is not the case at all. The balance of the lift needed to support the glider comes from the flow of air above the wing. Herein lies the key to flight. Lift is the result of the airflow above and over the wing
