Dust jacket notes: "Graph theory is increasingly being used to model situations arising in the applied sciences. This text, in addition to treating the basic material in some depth, includes a wide variety of applications, both to real-world problems and to other branches of mathematics.

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices, nodes, or points which are connected by edges, arcs, or lines. A graph may be undirected, meaning that there is no distinction between the two vertices associated with each edge, or its edges may be directed from ...

The line graph of the complete graph K_n is also known as the triangular graph, the Johnson graph $J(n,2)$, or the complement of the Kneser graph $KG_{n,2}$. Triangular graphs are characterized by their spectra, except for $n = 8$. They may also be characterized (again with the exception of K_8) as the strongly regular graphs with parameters $(n(n-1)/2, 2(n-2), n-2, 4)$.

Technical Communication Today speaks to today's students and how they expect to learn information. Instructional narrative is "chunked," so that readable portions of text are combined with graphics. This presentation facilitates learning, and models the way today's technical documents should be designed.
