Dan Abnett is probably my favourite author of the Black Library, so when I heard he was publishing a non-warhammer novel for Bad Robot I was intrigued. Embedded is a military sci-fi novel set in a slightly alternate universe sometime in the near future. Humanity has spread beyond the Solar system and begun settling other planets.

I've read a few of Dan Abnett's Black Library novels. He does write action very well, and it's the action in this that really stands out as above and beyond to me. Also, being that he is a veteran writer, he is consistent in everything he writes.

Embedded has an interesting concept and the world Abnett has created feels believable. The book flows well and it's not too long either, so that's a big plus. However, I do feel it drags a bit towards the middle, and some characters are introduced only to be forgotten or made less important later.
