

epipolar geometry in stereo pdf

In computer vision, the fundamental matrix is a 3×3 matrix which relates corresponding points in stereo images. In epipolar geometry, with homogeneous image coordinates, x and x' , of corresponding points in a stereo image pair, Fx describes a line (an epipolar line) on which the corresponding point x' on the other image must lie. That means, for all pairs of corresponding points holds

Fundamental matrix (computer vision) - Wikipedia

Image rectification is a transformation process used to project images onto a common image plane. This process has several degrees of freedom and there are many strategies for transforming images to the common plane. It is used in computer stereo vision to simplify the problem of finding matching points between images (i.e. the correspondence problem).

In this tutorial I'll be discussing how to use Markov Random Fields and Loopy Belief Propagation to solve for the stereo problem. I picked stereo vision because it seemed like a good example to begin with, but the technique is general and can be adapted to other vision problems easily. I try my ...
