The intra-aortic balloon pump (IABP) is a mechanical device that increases myocardial oxygen perfusion and indirectly increases cardiac output through afterload reduction. It consists of a cylindrical polyethylene balloon that sits in the aorta, approximately 2 centimeters (0.79 in) from the left subclavian artery. The balloon inflates and deflates via counter pulsation, meaning it actively ...

(b) (c) Figure 1.20 Pump performance curves 1.12 Pump Noise Pump noise is an important parameter used to determine the performance. Any increase in noise indicates increased wear and eventually pump failure.

Pressure - vacuum blowers RBS is the innovative positive displacement with 3 special profile lobes that, combined with a new configuration of the LOWPULSE system, reduces the residual pressure pulsation of the conveyed gas below 2% of the operating pressure.

The circulatory system, also called the cardiovascular system or the vascular system, is an organ system that permits blood to circulate and transport nutrients (such as amino acids and electrolytes), oxygen, carbon dioxide, hormones, and blood cells to and from the cells in the body to provide nourishment and help in fighting diseases, stabilize temperature and pH, and maintain homeostasis.

Multiple sclerosis (MS) is the most frequent chronic inflammatory demyelinating disease of the central nervous system (CNS), predominantly affecting the white matter but also parts of the gray matter. 1-4 The diagnosis and disease monitoring of MS is mainly based on MR imaging, which allows the establishment of an early diagnosis of MS within diagnostic criteria. 5-8 Furthermore, MR imaging ...
