MCC type 102, having a median particle size of about 100 μm (D 50 value measured by laser diffraction), presents acceptable flow properties required for successful high speed tableting (Shi et al., 2011, Shlieout et al., 2002). However due to the low bulk density of MCC, its mass flow is less than that of other common and denser excipients such as direct compression grades of lactose or ...
