This morning I checked Paul Allison's Statistical Horizons blog and found a post on measures for logistic regression. It introduced me to Tjur's by way of an example, which I repackaged.

Regression toward the mean is a significant consideration in the design of experiments.. Take a hypothetical example of 1,000 individuals of a similar age who were examined and scored on the risk of experiencing a heart attack.

Hi Ji-A. I used a simple linear regression example in this post for simplicity. As you alluded to, the example in the post has a closed form solution that can be solved easily, so I wouldn't use gradient descent to solve such a simplistic linear regression problem.

In statistics, ordinary least squares (OLS) is a type of linear least squares method for estimating the unknown parameters in a linear regression model. OLS chooses the parameters of a linear function of a set of explanatory variables by the principle of least squares: minimizing the sum of the squares of the differences between the observed dependent variable (values of the variable being ...

Machine learning is the science of getting computers to act without being explicitly programmed. In the past decade, machine learning has given us self-driving cars, practical speech recognition, effective web search, and a vastly improved understanding of the human genome.

Like the best-selling first two editions, *A Handbook of Statistical Analyses using R*, Third Edition provides an up-to-date guide to data analysis using the R system for statistical computing. The book explains how to conduct a range of statistical analyses, from simple inference to recursive partitioning to cluster analysis.

Hi Richard, I see that you use MATLAB and Java. It is better than use, for instance, Theano (That I see you also use)? I'm ML scientist (NLP), various on ML concepts are clear to me (specially on regularized machines and MLP) although there is a huge to learn.

Summary In this talk I begin noticing that while ignoring the crucial role of temporal coherence, the formulation of most of nowadays current computer vision recognition tasks leads to tackle a problem that is remarkably more difficult than the one nature has prepared for humans.

Gaussian Processes and Kernel Methods Gaussian processes are non-parametric distributions useful for doing Bayesian inference and learning on unknown functions. They can be used for non-linear regression, time-series modelling, classification, and many other problems.
