Analysis of Variance (ANOVA) Using Minitab By Keith M. Bower, M.S., Technical Training Specialist, Minitab Inc. Frequently, scientists are concerned with detecting differences in means (averages)

### **Analysis of Variance (ANOVA) Using Minitab**

Minitab is a statistics package developed at the Pennsylvania State University by researchers Barbara F. Ryan, Thomas A. Ryan, Jr., and Brian L. Joiner in 1972. It began as a light version of OMNITAB 80, a statistical analysis program by NIST. Statistical analysis software such as Minitab automates calculations and the creation of graphs, allowing the user to focus more on the analysis of data ...

Types of factor analysis. Exploratory factor analysis (EFA) is used to identify complex interrelationships among items and group items that are part of unified concepts. The researcher makes no a priori assumptions about relationships among factors.. Confirmatory factor analysis (CFA) is a more complex approach that tests the hypothesis that the items are associated with specific factors.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
