Physics (from Ancient Greek: $\varphi\upsilon\sigma\iota\kappa\acute{\alpha}$ (ἐπιστήμη φυσική), translit. physiká, — (epistá, —má“), lit. 'knowledge of nature', from $\varphi\upsilon\sigma\iota\varsigma$, phŷsis "nature") is the natural science that studies matter and its motion and behavior through space and time and that studies the related entities of energy and force. Physics is one of the most fundamental scientific disciplines, and its main goal is ...

Physics - Wikipedia

The meaning of physics in Aristotle. It is a collection of treatises or lessons that deal with the most general (philosophical) principles of natural or moving things, both living and non-living, rather than physical theories (in the modern sense) or investigations of the particular contents of the universe.

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.

Physics authors/titles "new" - arXiv

Course Overview. Information is something that can be encoded in the state of a physical system, and a computation is a task that can be performed with a physically realizable device. Therefore, since the physical world is fundamentally quantum mechanical, the foundations of information theory and computer science should be sought in quantum physics.

How do you do that? If $1/8$ of the original amount of parent isotope is left in a radioactive sample, how old is the sample? Answer: After 1 half-life, there is $1/2$ of the original amount of the parent left. After another half-life, there is $1/2$ of that $1/2$ left = $1/2 \times 1/2 = 1/4$ of original amount of the parent left.
