A key difference between a formula-based approach and the use of Power Query tools is the need to refresh queries. Just as for PivotTables, recalculation is not automatic and, although queries can be

The use of the Power Query / Get & Transform tools in Excel

Wind power is the use of air flow through wind turbines to provide the mechanical power to turn electric generators. Wind power, as an alternative to burning fossil fuels, is plentiful, renewable, widely distributed, clean, produces no greenhouse gas emissions during operation, consumes no water, and uses little land. The net effects on the environment are far less problematic than those of ...

Wind power - Wikipedia

A result (also called upshot) is the final consequence of a sequence of actions or events expressed qualitatively or quantitatively. Possible results include advantage, disadvantage, gain, injury, loss, value and victory. There may be a range of possible outcomes associated with an event depending on the point of view, historical distance or relevance.

Result - Wikipedia

Google Sheets supports cell formulas typically found in most desktop spreadsheet packages. These functions can be used to create formulas that manipulate data and calculate strings and numbers.
