Leptospirosis is an infectious disease of humans and animals that is caused by pathogenic spirochetes of the genus *Leptospira* (see the image below). It is considered the most common zoonosis in the world and is associated with rodents in settings of poor sanitation, agricultural occupations, and increasingly "adventure" sports or races involving fresh water, mud, or soil exposure.

### **Leptospirosis: Practice Essentials, Background**

The liver is an epithelial-mesenchymal outgrowth of the caudal part of the foregut, with which it retains its continuity by the biliary tree. Hepatocytes in the liver are arranged in anatomic plates called hepatic laminae, which are lined by endothelium and separated from each other by hepatic sinusoids.

Cholecystitis is inflammation of the gallbladder. Symptoms include right upper abdominal pain, nausea, vomiting, and occasionally fever. Often gallbladder attacks (biliary colic) precede acute cholecystitis. The pain lasts longer in cholecystitis than in a typical gallbladder attack. Without appropriate treatment, recurrent episodes of cholecystitis are common.

Cholangiocarcinoma, also known as bile duct cancer, is a form of cancer that is composed of mutated epithelial cells (or cells showing characteristics of epithelial differentiation) that originate in the bile ducts which drain bile from the liver into the small intestine. Other biliary tract cancers include gallbladder cancer and cancer of the ampulla of Vater.
