Vector control, also called field-oriented control (FOC), is a variable-frequency drive (VFD) control method in which the stator currents of a three-phase AC electric motor are identified as two orthogonal components that can be visualized with a vector. One component defines the magnetic flux of the motor, the other the torque. The control system of the drive calculates the corresponding ...

Direct torque control (DTC) is one method used in variable frequency drives to control the torque (and thus finally the speed) of three-phase AC electric motors. This involves calculating an estimate of the motor's magnetic flux and torque based on the measured voltage and current of the motor.

### **Direct torque control - Wikipedia**

Updated: 2016-01-22. The VESC has several extra ports and much extra computational power, so it can be used to run custom user code in addition to controlling a motor. This is convenient when there are space constraints and it is also the best way to implement real-time control applications where timing is critical.

Now you should be able to start the program and connect to the motor controller. A short tutorial to run a motor. In this section I will describe how to run an outrunner motor in sensorless mode from Ubuntu Linux. The reason for using an outrunner is that the parameters in the github project are tuned to work with most of my outrunners that I have at home.

Speed-Sensorless Control System for Railway Traction. Takashi Sano. A development on the railway traction control system has attained speed-sensorless control of induction motor drive.

## A New Sensorless Vector Control Method for Induction Motor.

A New Sensorless Vector Control Method for Induction Motor. Abstract. The impact of the rotor slot number selection on the induction motors is investigated. Firstly, analytical equations will reveal the spatial harmonic index of the air gap magnetic flux density, connected to the geometrical features and the saturation of the induction motor.

## Abstract. The impact of the rotor slot number selection on the induction motors is investigated.

Firstly, analytical equations will reveal the spatial harmonic index of the air gap magnetic flux density, connected to the geometrical features and the saturation of the induction motor.
