Mass spectrometry (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

An LC-QTOF-MS method was developed for the separation and characterization of related substances in varenicline tartrate. The separation was established on an InertSustain C18 column (4.6 mm Å— 150 mm, 5 Î¼m) by liner gradient elution using 0.05% trifluoroacetic acid as mobile phase A and acetonitrile as mobile phase B.

Impurity profiling of varenicline tartrate by LC-QTOF mass

1. Introduction. The detection and identification of body fluids at a crime scene are very important aspects of forensic science. Determining whether or not there is a body fluid present and subsequently identifying it allows the sample to undergo further laboratory testing including DNA analysis which is a very crucial step in a wide range of investigations.

Analysis of body fluids for forensic purposes: From

From Grams to Tons: Fine chemical high-tech company which contains R&D, production, and sales. BEIJING LYS CHEMICALS CO, LTD, established in 2004, is a fine chemical high-tech company which contains R&D, production, and sales.
