BEHAVIOURAL ECONOMICS AND ENVIRONMENTAL POLICY DESIGN - OECD

Drug design, often referred to as rational drug design or simply rational design, is the inventive process of finding new medications based on the knowledge of a biological target. The drug is most commonly an organic small molecule that activates or inhibits the function of a biomolecule such as a protein, which in turn results in a therapeutic benefit to the patient.

Target-Value Design: Nine Foundational Practices for

Innovation can be defined simply as a "new idea, device or method". However, innovation is often also viewed [by whom?] as the application of better solutions that meet new requirements, unarticulated needs, or existing market needs. Such innovation takes place through the provision of more-effective products, processes, services, technologies, or business models that are made available to ...
