Signs and symptoms. Individuals in a hypomaniac state have a decreased need for sleep, are extremely outgoing and competitive, have a great deal of energy and are otherwise often fully functioning (unlike full mania).. Distinctive markers. Specifically, hypomania is distinguished from mania by the absence of psychotic symptoms and grandiosity, and by its lesser degree of impact on functioning.

## Hypomania - Wikipedia

Hypomania and mania are periods of over-active and excited behaviour that have a significant impact on your day-to-day life. Hypomania is a milder version of mania that lasts for a short period (a few days) Mania is a more severe form that lasts for a longer period (a week or more) Some people find ...

Sociocognitive research has demonstrated that power affects how people feel, think, and act. In this article, I review literature from social psychology, neuroscience, management, and animal research and propose an integrated framework of power as an intensifier of goal-related approach motivation. A growing literature shows that power energizes thought, speech, and action and orients ...
