Atomic, molecular, and optical physics (AMO) is the study of matter-matter and light-matter interactions; at the scale of one or a few atoms and energy scales around several electron volts.: 1356 The three areas are closely interrelated. AMO theory includes classical, semi-classical and quantum treatments. Typically, the theory and applications of emission, absorption, scattering of ...

Electromagnetism is a branch of physics involving the study of the electromagnetic force, a type of physical interaction that occurs between electrically charged particles. The electromagnetic force usually exhibits electromagnetic fields such as electric fields, magnetic fields, and light, and is one of the four fundamental interactions (commonly called forces) in nature.

L'esclamazione «Eureka!» tradizionalmente attribuita all'antico matematico siracusano Archimede, che sembra l'abbia proferita quando, entrando in una vasca da bagno e notando che il livello dell'acqua era salito, capì che il volume di acqua spostata doveva essere uguale al volume della parte del suo corpo immersa. Si racconta inoltre che il desiderio di condividere questa scoperta ...

La cantidad de movimiento, momento lineal, ímpetu o momentum es una magnitud física fundamental de tipo vectorial que describe el movimiento de un cuerpo en cualquier teoría mecánica. En mecánica clásica, la cantidad de movimiento se define como el producto de la masa del cuerpo y su velocidad en un instante determinado. Históricamente, el concepto se remonta a Galileo Galilei.

Capacidade térmica ou capacidade calorífica (usualmente denotada pela letra ) é a grandeza física que determina a relação entre a quantidade de calor fornecida a um corpo e a variação de temperatura observada neste. [1]A capacidade térmica caracteriza o corpo, e não a substância que o constitui. A capacidade térmica é uma propriedade extensiva, ou seja, proporcional à quantidade ...

Urban heat island, UHI is a local climate change in which the temperature of an urban area is significantly higher than that of surrounding rural areas. The effect is most pronounced in the center of the city, where the temperature can be several degrees Celsius higher than in the surrounding countryside. The effect is caused by the heat capacity of the buildings and the heat released by the city's activities. The effect is also caused by the heat released by the city's buildings and the heat released by the city's activities. The effect is also caused by the heat released by the city's buildings and the heat released by the city's activities.
