Smart beta is one subset of factor investing. Factor investing harnesses the power of broad and persistent
drivers of return. Factor investing can refer to macro factors (which affect returns across asset classes) as
well as style factors (which affect returns within asset classes) and can be implemented with or without
leverage.

â€“ Factor analysis is a collection of methods used to examine how underlying constructs inâ€œunce the
responses on a number of measured variables. â€“ There are basically two types of factor analysis:
exploratory and coniâ„¢rmatory. â€“ Exploratory factor analysis (EFA) attempts to discover the nature of the
constructs inâ€œencing a set of responses.

Factors in Z Recall that the factors of an integer n are all of the integers k such that n = mk for some third
integer m. Examples. â€œ 12 = 3â€œ 4, so 4 is a factor of 12. â€œ 30 = 2â€œ 15, so 15 is a factor of 30. â€œ 1, 1, n
and n are all factors of an integer n. Thatâ€œ™s because n = nâ€œ 1 and n = (n)(1). Important special case.

In the special vocabulary of factor analysis, the parameters Â¬ ij. are referred to as loadings. For example, Â¬
12. is called the loading of variableY. 1. on factor F. 2. In this MBA program, Â¬ nance is highly quantitative,
while marketing and policy have strong qualitative orientation. Quantitative skills should help a student in
Â¬ nance, but not in marketing or policy.

Factoring - Greatest Common Factor

Objective: Find the greatest common factor of a polynomial and factor it out of the expression. The opposite of multiplying polynomials together is factoring polynomials. There are many benefits of a polynomial being factored. We use factored polynomials to

two factors (at least 1, 7, 11, 77), so it must be composite. c. The only factors of 139 are 1 and 139. Since it has exactly two factors, 139 is a prime number. d. Since $1 + 4 + 1 = 6$, and 3 is a factor of 6, then 3 is a factor of 141. Thus it has more than two factors (at least 1, 3, 141), so it must be composite.
